

Odonata from the South Natuna Islands, South China Sea

By F. F. LAIDLAW

There is nothing in this series which would guide one in localizing it from any particular part of the Malayan sub-region if information were withheld as to the place of its collecting. It is typically Malaysian without further specification.

The specimens were collected by Mr. P. M. de Fontaine during August 1931.

MALAYSIAN DRAGONFLIES (ODONATA)

ZYGOPTERA

Coenagriidae

Ceriagrion eerinornbellum (Brauer).

5 ♂♂. 1 ♀. Pulau Panjang. Aug. 9 :31.

ANISOPTERA

Libellulinae

Oreithemis pulcherrima Brauer.

1 ♂. 1 ♀. Bukit Kuti, Sirhassen, Aug. 21 :31.

Orthetrum sabina (Drury).

1 ♀. Bukit Kuti, Sirhassen, Aug. 21 :31.

Orthetrum chrysis (Selys).

2 ♂♂. Bukit Kuti, Sirhassen, Aug. 21 :31.

Brahygonia oculata (Brauer).

3 ♂♂. 1 ♀. Pulau Panjang. Aug. 8 :31.

Brahydiplax chalybea Brauer.

1 ♂. Pulau Panjang. Aug. 8 :31.

Raphismin bispina (Hagen).

1 ♀. Pulau Subi Kechil.

Neurothemis fluviatilis (Fabr).

7 ♂♂. 4 ♀♀. (2 heteromorph). Pulau Panjang. Aug. 8 :31.

1 ♂. Pulau Subi Besar. Aug. 6 :31.

1 ♂. Pulau Subi Kechil. Aug. 5 :31.

1 ♀. Bukit Kuti, Sirhassen.

Rhyothemis phyllis (Sulz).

1 ♂. 1 ♀. Pulau Panjang. Aug. 9 :31.

Rhyothemis obsolescens Kirby.

1 ♂. Pulau Subi Besar. Aug. 6 :31.

2 ♂♂. Pulau Panjang. Aug. 13 :31.
